Peartree Software Releases Dealership 3.0 Multi-location

WATERLOO, ON – April 19, 2007 – **Peartree Software Inc.** is pleased to announce the release of **Dealership Management 3.0 Multi-location.** Dealership Management Version 3.0 extends the rich functionality of prior releases to include full support for multi-location dealerships.

Multi-location functionality is critical to dealerships that operate more than one physical location. These dealerships typically manage each location as separate entities, each carrying their own part and unit inventories, and producing their own financial reports. A common challenge is producing consolidated financial statements and summaries for the entire organization.

Peartree Software's Multi-location functionality was designed to be as flexible as possible and to provide support regardless of where operations physically reside. Customers can choose to mix what areas are managed independently and what areas are managed centrally. For example, purchasing may be centralized if necessary, even though inventories are kept separately. Financial reports can be produced for each location or a consolidated report can be produced for the entire organization.

"The potential cost savings to companies in terms of software and hardware is tremendous," noted Roy Clarke, Peartree's CTO. "If a company has an internet connection, our product can run on any number of locations and be used by any number of users. The initial investment in the software does not change except for additional user licenses which may be required."

The release of Dealership 3.0 includes significant new features and functionality which further extend the technical lead that Peartree Software has in the dealer management software market. "This release builds on a strong base product with many new features in Dealership 3.0," stated David Moser, President of Peartree. "Our customers can continue to rely on Peartree to focus on developing and delivering industry-leading functionality into our products."

Enhancements have been made in all areas of the product, including sales, service, inventory, purchasing and finance. Some of the new features of Version 3.0 include:

- Improved daily update drill down reporting
- Increased unit inquiry and cost reporting functionality
- Additional finalize sale functionality
- Additional unit inventory cost reporting options
- Export ability to send sales tax report to Excel
- Enhanced work order functionality – including part install status and PO ordering and number referencing
- Tracking of actual vs. billed mechanic hours
- Enhanced parts inquiry – labels can be printed and costs displayed
- Increased parts update functionality, include selling price overrides
- Additional unit update warranty tracking enhancements
- Enhanced bank reconciliation process
- Productivity boost - GL inquiry account number direct access
- Export ability of GL update to Excel feature
- Augmented GL reports, including profit/loss allows for fiscal period and department comparison reporting
- Improved AR and AP processing and reporting enhancements
- New AR to AP transfer process
- New payroll features – cheque printing and summary print of T4s

Peartree Software's Dealership Software is a fully integrated web-enabled package supporting both hosted and ASP/SaS implementations. It was designed to be simple to use, reliable, and affordable to any size dealership within any market including RV, power sport, marine, motorcycle and auto. Peartree Software's

mission is to satisfy the needs of customers by simplifying transactional processing through integration. Data is entered only once and is processed throughout the chain. This ensures accuracy of data and increased productivity within every department from sales to accounting.
